1 Introduction to Dexcom CLARITY

Intended Use/Safety Statement
The web-based Dexcom CLARITY software is intended for use by both home users and healthcare professionals to assist people with diabetes and their healthcare...
professionals in the review, analysis, and evaluation of CGM data to support effective diabetes management.

**WARNING** Treatment decisions, like treating for a low or dosing for a high, should not be made based on this software. Home users should follow instructions on the CGM system.

**WARNING** The software is not intended to replace self-monitoring practices as advised by a healthcare professional.

**CAUTION** Dexcom CLARITY provides recently available CGM information from the Dexcom CGM app or receiver. Since the smartphone system sends data to the Dexcom server, the information is always older than the real-time data displayed on the user’s CGM app or receiver. Use the current information on the CGM app or receiver for treatment decisions, not the information from Dexcom CLARITY as that information is outdated.

**CAUTION** The software does not provide any medical advice and should not be used for that purpose. Home users must consult a healthcare professional before making any medical interpretation and therapy adjustments from the information in the software.

**CAUTION** Healthcare professionals should use information in the software in conjunction with other clinical information available to them.

**CAUTION** Federal (US) law restricts this device to sale by or on the order of a licensed healthcare professional.

**About Dexcom CLARITY**
Dexcom CLARITY is a software program that allows the transfer of glucose data from your patient’s Dexcom CGM system to Dexcom remote servers for data management to assist in your patient’s use of the Dexcom CGM system and to assist in your provision of healthcare services to your patient. Dexcom CLARITY can transfer and manage data from the Dexcom G4 PLATINUM, Dexcom G5 Mobile CGM System, and Dexcom G6 (all of which are referred to as Dexcom CGM systems).

After the glucose data is uploaded to Dexcom CLARITY, the information is processed by Dexcom CLARITY and displayed on your computer in graphs to help you analyze trends and patterns in glucose. Data reports can be saved, printed, and emailed.

**Computer and Internet Configurations**
An internet connection of 1.5 Mbps or more is required to install the software from the web, upload data, or view the online User Guide.

It is recommended that you use an appropriate firewall program and an anti-virus program on your computer to protect against viruses, malware and unauthorized access.
to and use of your computer and the information stored, processed and transmitted by it.

Dexcom CLARITY supports the following system configurations:

- **Windows 7, 8, or 10**
  - 1.3 GHz processor and 1 GB free RAM with 100 MB free disk space
  - Microsoft .NET Framework 4.6.1 or greater, full version
  - Display resolution of 1024 x 768 pixels or greater
  - Chrome, Firefox, or Internet Explorer 11 run in desktop mode or Microsoft Edge
  - USB 2.0+ port to connect the USB cable from the patient’s optional Dexcom receiver to upload data

- **Mac OSX 10.12, 10.13, 10.14, or 10.15**
  - 2.3 GHz processor and 4 GB free RAM with 100 MB free disk space
  - Display resolution of 1280 x 800 pixels or greater
  - Safari 9.1, Chrome, or Firefox for Mac OSX
  - USB 2.0+ port to connect the USB cable to upload data from the optional Dexcom receiver

Optional computer configurations:

- A PDF reader for viewing, saving, and printing reports
- A printer for printing reports
- An Excel spreadsheet viewer for exported data

To run Dexcom CLARITY, your network must allow the following outbound network traffic:

- dexcom.com (and all subdomains) on port 443
- agent.mydiabetesdata.com with DNS loopback support to 127.0.0.1

**Terms of Use**

Your use of Dexcom CLARITY and Dexcom services is subject to the Terms of Use located at [dexcom.com/linked/documentservice/TermsOfUse](http://dexcom.com/linked/documentservice/TermsOfUse)

By using this guide, you agree to comply with the applicable terms and conditions in connection with your use of Dexcom CLARITY, services and this User Guide.

**Privacy Policy and Privacy Practices**

Read the Dexcom Privacy Policy at [dexcom.com/linked/documentservice/PrivacyPolicy](http://dexcom.com/linked/documentservice/PrivacyPolicy)

**Proprietary Rights**

Dexcom CLARITY User Guide for Clinics
Dexcom CLARITY and this User Guide are ©2016-2020 by Dexcom, Inc. and its licensors. All Rights Reserved. Dexcom CLARITY software downloaded onto your computer or other devices might include certain third-party software licensed by Dexcom and the notices for which are set forth at dexcom.com/notices

Third party products mentioned in this guide are subject to the rights of their manufacturers and distributors in the products and their trademarks.

Contact Dexcom
For help with a Dexcom CGM system, questions about Dexcom CLARITY, or to receive a printed version of the User Guide, contact dexcom.com/contact

2 Access Dexcom CLARITY
To access Dexcom CLARITY on the web:

1. Go to clarity.dexcom.com/professional
2. Enter your Dexcom account username and password.

If your clinic doesn’t have an account, click Register Now. If you need a login for your clinic’s account, contact an administrator of your clinic’s Dexcom CLARITY account.

Clinic Registration
Every clinic must be registered by an authorized representative to be accessed by healthcare professionals. By registering the clinic, you become an Administrator for the Dexcom CLARITY account. Be sure to have at least two administrators listed for your clinic. See Staff Roles to learn more about account levels.

If you need access to your clinic’s account, contact an administrator of your clinic’s Dexcom CLARITY account.

Your Dexcom CLARITY account is specific to your geographical area. Accounts created outside the United States will not be accessible within the United States.

To register your clinic:

1. Have an authorized representative complete the registration form at clarity.dexcom.com/professional
2. Click Submit.
3. Click Complete Registration from the activation email sent to you.
4. Enter a username and password for yourself.
5. Click Complete my registration, then click OK.

Logging Out
At any time, you can log out of Dexcom CLARITY. Click your account name at the top right of the page, then click **Logout**. This is useful if multiple account users access the same computer.

**Settings**
Settings allows for update your profile preferences and password. Clinic administrators can have update clinic and security settings. The options in Settings are:

- **Account**: Update your name and email.
- **Password**: Update your password. You must know your current password.
- **Clinic Information**: Administrator access only. Update clinic name, address, and phone.
- **Security**: Administrator access only. Select duration of forced password resets and account inactivity auto-suspension. Changes made apply to all clinic users.

### 3 Staff Accounts
The Staff page displays all clinic user account names, email addresses, user roles, and account status. If you just created your clinic’s Dexcom CLARITY account, you will see only your own account listed.

**Staff Roles**
Dexcom CLARITY offers two different kinds of user roles: Standard User and Administrator.

- **Standard User** access and manage the Patient List, upload CGM data and view patient reports.
- **Administrator** access and manage the Patient List and Staff Accounts. They upload CGM data, view patient reports and invite new clinic users. Be sure to have at least two administrators listed for your clinic.

**Account Status**
The options for account status are:

- **Active**: Account is available for use.
- **Suspend**: Account is disabled.
- **Invited**: Account owner has been sent an email invitation to use Dexcom CLARITY.
- **Invitation Suspended**: Invitation to use Dexcom CLARITY has expired.
- **Expired**: No logins for 90 days.
- **Locked**: Exceeded allowed login attempts.

**Adding Staff Accounts**
Dexcom CLARITY User Guide for Clinics
As an Administrator, you can invite other healthcare professionals to use Dexcom CLARITY.

To invite staff:

1. Click **Staff**.
2. Click **Add Staff Account**.
3. Enter the healthcare professional’s name and email address.
4. Select **Standard User** or **Administrator** to assign the user role and privileges.
5. Click **Save** to send an activation email to the invited user.
6. Click **Add another Staff Account** or **Close**.

New users must accept the invitation and create a username and password to activate their account. The user will appear in the Staff Accounts list as Invited until activation.

**Accepting a Staff Account Invitation**

After an administrator adds you to the clinic account, you will receive an email invitation from Dexcom CLARITY. You will need a new invitation if you do not complete your registration before the expiration date given.

To complete your registration:

1. Click **Complete Registration** from the activation email sent to you.
2. Enter a username and password for yourself.
3. Click **Complete my registration**, then click **OK**.

**Managing Staff Accounts**

Administrators can edit names, email, account status and roles for staff accounts.

To manage staff accounts:

1. Click **Staff**.
2. Locate the user you want to edit, then hover your cursor next to their account status until the Edit icon appears.
3. Click **Edit**.
4. Make the desired changes, then click **Save**.
5. Click **OK** on the success page.

You can re-send invitations to create an account from the Edit Staff Account page by checking the box for it.

Administrator users cannot change their own user role from Administrator to Standard User. Another Administrator must change the role for them.
You cannot permanently delete a user account. You can only suspend accounts to remove access.

4 Patients List
The Patients page lists patients entered into your Dexcom CLARITY clinic account. All Dexcom CLARITY clinic users have access to this page.

For each patient, you can upload or export CGM data during visits, save or print reports, view interactive reports, edit or delete their information and invite them to share their CGM data. To access these options, click the patient name.

Adding a patient to your clinic’s Dexcom CLARITY Patients list does not create a Dexcom CLARITY account for that patient. Patients must create their own account in Dexcom CLARITY if they want to view or share CGM data uploaded at the clinic. See Data Sharing for more information about sharing.

Adding a Patient
To add a patient:

1. Click Patients.
2. Click Add new patient.
3. Enter the patient’s name, date of birth and an optional patient ID, then click Save.
4. Select another option or click Close.

The Patient ID is optional and can be any combination of alpha or numeric characters to identify patients within your clinic.

Editing a Patient
To edit a patient:

1. Click Patients.
2. Click the patient’s name you want to edit.
3. Click Edit.
4. Make the desired changes.
5. Click Save, then OK.

Deleting a Patient
Deleting a patient deletes all CGM data uploads and sharing and cannot be undone.

To delete a patient:

1. Click Patients.
2. Click the patient’s name you want to edit.
3. Click Delete.
4. Click the **Yes, I want to delete this patient** box.
5. Click **Delete**, then **Close**.

### Navigating Patients

There are two ways to navigate the Patients list to find a specific patient: Search or Sort.

Search uses the search bar at the top of the list to find a specific patient.

To search for a patient:

1. Enter a patient’s last name or Patient ID.
2. Press the Enter key on your keyboard to start the search.

Sort indexes by patient last name, date of birth (DOB) or Patient ID in ascending or descending orders. By default, patients are sorted alphabetically by last name.

To sort the patient list:

1. Click **PATIENT NAME**, **DOB**, or **PATIENT ID** on the green bar.
2. Click your selection again to sort in the reverse order.

If you have more than 10 patients, you access them using the page numbers at the bottom of the list.

### 5 Patient Data Sharing

Patients must give permission to share their CGM data by accepting a sharing invitation from your clinic. Data is not shared until the patient creates or logs into their Dexcom CLARITY account to accept the invitation to share.

After the patient accepts their sharing invitation, data uploaded by the patient from a Dexcom receiver or Dexcom Mobile app will be available for viewing at the clinic through the clinic’s Dexcom CLARITY account. Receiver data that is uploaded at the clinic will then be available for the patient to view in their Dexcom CLARITY account as well as the clinic's Dexcom CLARITY account.

Patients or clinics can stop sharing data at any time.

- All data uploaded by receiver to the clinic’s Dexcom CLARITY account will still be accessible at the clinic. This data will not be accessible from the patient’s Dexcom CLARITY account after sharing is stopped.
- All data sent from the Dexcom Mobile app or uploaded from the receiver to the patient’s personal Dexcom CLARITY account will not be accessible to the clinic after sharing is stopped.
• Patients continue to see their own data within their personal Dexcom CLARITY account via receiver upload or sent from their Dexcom Mobile app.

Clinics use Dexcom CLARITY to invite patients to share data with the clinic. They can provide an invitation verbally, printed, or by email. Invitations provide a sharing code that patients enter into their personal Dexcom CLARITY accounts. Once they enter the code, the accounts will automatically share data between them.

**Inviting a Patient to Share Data**

Use Dexcom CLARITY to invite patients to share data with your clinic. Provide an invitation to patients in print or by email. Invitations provide a sharing code that patients enter on their personal Dexcom CLARITY accounts. Once they enter the code, the accounts will automatically share data between them.

To create an invitation:

1. Click **Patients**.
2. Click the patient’s name you want to invite.
3. Click **Share data**.
4. Click **Print an Invitation** to view and print, or **Email an Invitation**, then enter the patient’s email address.
5. Click **Invite**, then **Close**.

**Stop Sharing Data**

To stop sharing data with a patient:

1. Click **Patients**.
2. Click the patient’s name you want to stop sharing with.
3. Click **Stop sharing data**.

The patient’s name will still appear on the Patient List for your reference.

**Sharing Status**

To determine whether a patient is sharing data with your clinic, view the Data Sharing column of the Patients list for that patient.

- **Invited**: Patient was invited to share.
- **On**: Patient is sharing.
- **Private**: Patient is sharing, has not consented to privacy laws.
- **Off**: Patient is not sharing.
6 Upload Data
You can upload a patient’s CGM data from their Dexcom receiver each time they are at your clinic. If a patient is using the Dexcom Mobile app, data is continuously uploaded and viewable as long as sharing is authorized. See Data Sharing for information.

It is possible to use both a smartphone and a receiver to provide CGM data.

The smartphone system sends data to the Dexcom server, where that data is made available for reports. To receive this data, the smartphone needs to be connected to the internet and have the Dexcom Mobile CGM app running.

The Dexcom receiver requires connection to a computer to upload the data periodically.

If patients use a smartphone part of the time and a receiver part of the time, then Dexcom CLARITY needs data from both to provide accurate statistics.

Upload Patient Data
When you upload from a patient’s Dexcom receiver at the clinic, the data is immediately viewable from their entry in the Patient List.

To upload data for each patient:

1. Click Patients.
2. Click the desired patient’s name.
3. Click Upload data.
4. Connect the CGM per the instructions provided on the screen.
5. Click Install or Upload.
6. Click Save or print report, Go to interactive reports, or Review the upload history.

Upload History
The bottom of the Upload Data page shows the most recent 10 uploads. The table includes upload location including date and time, device type, and device serial number.

7 Report Features
In Dexcom CLARITY, you view glucose data reports with interactive graphs and relevant statistics. You can access the reports directly after uploading patient data, or do the following at any time:

1. Click Patients.
2. Click the desired patient’s name.
3. Click Go to interactive reports.

To return to the Patients list while viewing interactive reports, click RETURN TO PATIENT LIST from any reports page.
**Date Range Selection**  
By default, Dexcom CLARITY reports display the most recent 14 days of data.

To change the date range, from any report:

1. Click on the date range.
2. Choose the recent number of days or select a custom date range, then click **OK**.

**CGM Data, Calibrations, and Alerts Filters**  
You can filter CGM data, Calibrations, and Alerts from graphs. By default, these events are viewable by a green slider. To turn off, click the slider to white.

**Health Events**  
Health events entered into the Dexcom CGM system, appear on the graphs. Events show up on all graphs that include the date of the event. Each event is marked with an icon displayed below the x-axis and viewed by hovering your cursor over the icon.

If you enter multiple events within the same one-hour window, the icons are displayed stacked and show multiple event information when you hover over the icon.

**Patient Glucose Ranges**  
At the bottom of the Reports list, click **Patient Glucose Ranges** to change only your view of the glucose target ranges. These setting changes only apply to your account view and do not change any other clinic account view, patient’s personal settings, or any CGM settings.

- **Glucose Time/Target Range**: To customize the upper and lower limits for the glucose target range click and hold a gray circle icon and drag it up or down to set the desired glucose levels for the target range. Or select the time and limits of the glucose level for both Day and Night, from the drop-down lists. Throughout Dexcom CLARITY, the upper limit line is always yellow, and the lower limit line is always red. The colors may appear different based on your monitor settings.
- **Day and Night**: To customize the upper and lower limits for the glucose target range click and hold a gray circle icon and drag it up or down to set the desired glucose levels for the target range. Or select the time and limits of the glucose level for both Day and Night, from the drop-down lists.
- **Very High**: Select 250 mg/dL or above as the limit for Very High displays within Dexcom CLARITY reports. Changing this setting does not change the Dexcom CGM settings.
- **Very Low**: Select 50 mg/dL or 54 mg/dL as the limit for Very Low displays within Dexcom CLARITY reports. Changing this setting does not change the Dexcom CGM alerts.
• **AGP Target Range**: Select the Low and High limits you want to view on the AGP report. Changes you make for this setting only apply to the AGP report.

**Print Reports**
To print a report, from any report page:

1. Click the *print* icon at the top of the page.
2. Select a date range.
3. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.
4. Select at least one report to print.
5. Click **Print Report**.

**Download Reports**
To download a report as a PDF, from any report page:

1. Click the *download* icon at the top of the page.
2. Select a date range.
3. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.
4. Select at least one report to download.
5. Click **Save Report**.
**Export Reports**

You can export raw glucose data values, calibration values and events to an Excel spreadsheet, saved to your computer. This generates a .csv file.

To export a report, from any report page:

1. Click the **export** icon at the top of the page.
2. Select a date range.
3. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.
4. Click **Export**, then **Close**.

**8 Overview Report**

The Overview report shows a glucose summary dashboard of statistics, a pattern summary, and the patient’s best glucose day for the date range selected. It also provides information about the Dexcom CGM system used to upload the data shown.

**Dashboard**

The Overview page includes a summarized dashboard of key measurements from the selected date range including:

- **Glucose Management Indicator (GMI)**: Approximates the laboratory A1C level expected based on average glucose measured using CGM values. Average glucose is derived from at least 12 days of CGM data. The GMI may be similar to, higher than, or lower than the laboratory A1C. Differences between GMI and laboratory A1C may reflect differences among an individual's red blood cell lifespan, how glucose binds to hemoglobin, or due to a recent fluctuation in glucose control.

- **Average glucose (CGM)**: The average of all the CGM glucose readings from the selected date range.

- **Standard deviation (CGM)**: Shows how much CGM glucose readings rise and fall. This is also known as glycemic variability.

- **Time in range**: The percentage of time that glucose levels are in low, target, and high ranges. The following are recommended ranges from an international consensus. Dexcom CLARITY ranges may be different than Dexcom CGM alerts. Changes made here apply only to Dexcom CLARITY.
  
  o Target Range: 70-180 mg/dL
  o Very High: Above 250 mg/dL
  o Very Low: Below 54 mg/dL

- **Sensor usage**: Provides a high-level view of Dexcom CGM device usage.
- **Days with CGM data** shows the number of days during the reporting period with at least 50% CGM readings.
- **Avg. calibrations per day** displays the average number of calibrations per day, entered by the patient, during the reporting period. Only days with at least 50% CGM readings are included. The Dexcom G6 system is approved for use without calibrations or optionally with calibrations, making it possible to have zero average daily calibrations.

- **Insulin**: This feature is only available for Dexcom compatible connected insulin devices. Connected insulin devices have Bluetooth capability and require pairing with their app. To see insulin data in Dexcom CLARITY, use the connected insulin device app to connect to Dexcom.

  Dexcom CLARITY provides the following insulin statistics as manually entered into Dexcom apps, or as collected by a connected insulin device.

  - **Fast-acting to long-acting insulin ratio**: Compares fast-acting to long-acting doses as percentages within the date range selected. Long-acting doses may need to be configured in the connected device to display in Dexcom CLARITY.
  - **Average total daily dose**: Average number of long- and fast-acting units per day within the selected date range.
  - **Average daily fast-acting doses**: Average number of fast-acting doses taken per day within the selected date range.

**Patterns Summaries and Best Day**

The Overview report shows up to four patterns identified in the data. To view a summarized pattern on the Patterns report, click the box of the pattern for detailed graphs and statistics.

Limits for low and high glucose levels are modified in Settings.

A patient’s best glucose day is the day the patient was most within the target range of the selected date range. Click the best glucose day box for a detailed view.

**Devices**

Details about the Dexcom CGM system in use, include the Serial Number, last upload, and current alert settings. Connected devices information are also included here.

**9 Patterns Report**

The Patterns report provides graphical patterns, statistics and considerations for highs, lows and the patient’s best day within the selected date range. These are the same
patterns summarized on the Overview report. There will always be a Best Day tab to review. Click each tab to see details.

**Pattern Graphs**
Each pattern is represented by a series of graphs, dated by each time the pattern was found in the selected date range, or a pattern occurrence.

Each graph includes:

- A 24-hour timeline on the bottom x-axis.
- Scale for glucose readings on the left y-axis.
- Target range limits on the right y-axis.
- CGM lines that connect the individual CGM glucose readings.
- Values associated with each CGM reading viewed by moving your mouse along the CGM lines.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis, as determined in Settings. The yellow line is the upper limit and the red line is the lower limit.
- Significant daily data that is used to indicate the pattern, highlighted in the white background columns.
- Health events as recorded on the Dexcom CGM system shown with an icon below the x-axis and viewed by hovering your cursor over each icon.
- Calibration events entered into the Dexcom CGM system shown by the gray circle C icon, when the calibration toggle is active.

**Pattern Occurrences**
A pattern occurrence is a period of glucose data that matches a larger pattern of similar periods of glucose data. For example, if the data shows a pattern of nighttime lows; one of those nighttime lows would be an occurrence. Days may have multiple occurrences of a pattern.

Pattern occurrence are the white columns. Gray areas of the graph are not part of the pattern. Glucose values and events are viewed by moving your mouse over any part of the graph and hovering.

The Best Day pattern graph does not include gray shading.

A letter marks each pattern occurrence. This letter is displayed at the top of the graph, above the white column, and displayed at the left of the graph with the times of the occurrence.

Column and left side pattern occurrences will be highlighted when you hover your cursor over occurrences.
Rebounds
A rebound is when a pattern occurrence is followed immediately by the opposite – a high after a low, or a low after a high. The number of rebounds in the glucose data set is noted in the summary before the graphs.

Pattern Statistics
Statistics for the selected date range of patterns include average glucose measurement, standard deviation and the time in range.

Considerations
Based on the patterns of the selected date range, some possible considerations are provided at the bottom of the Patterns report.

10 Trends Report
The Trends report allows you to see glucose trends at different times of day over the selected date range. For example, you might see that your glucose levels are stable during mornings but are less stable during afternoons.

To filter the Trends data, click Days, Time of Day, Events, and Usage, then click Apply. You must click Apply every time you change a filter to update the graph.

Click the CGM and Calibrations sliders to toggle them on or off.

Trends Graph
The Trends graph includes:

- A 24-hour timeline along the bottom x-axis.
- Scale for glucose readings on the right y-axis.
- CGM lines that trace CGM glucose data readings.
- Values associated with each CGM readings viewed by moving your mouse along the CGM lines.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis and values as set in Settings, on the left y-axis. The yellow line is the upper limit and the red line is the lower limit.
- Calibration events entered into the Dexcom CGM system shown by the gray circle C icon, when the calibration toggle is active.

The yellow and red shaded bars show patterns of clinically significant hyper- or hypoglycemia, respectively. Three factors determine clinical significance:

- Time spent in hyper- or hypoglycemia
- Scale of hyper- or hypoglycemia
• Frequency of hyper- or hypoglycemia

The darkest shaded bars are the most significant areas of hyper- and hypoglycemia. Lighter shaded bars show other patterns of hyper- and hypoglycemia, including data not clinically significant.

**11 Overlay Report**

The Overlay report displays one week of data in each graph with colored lines to represent a single day’s data over time. For example, if you chose a date range of 10 days and do not apply any filters, you would see two graphs, one with seven lines and one with three.

To filter the Overlay data, click **Days, Time of Day, Events, and Usage**, then click **Apply**. You must click **Apply** every time you change a filter to update the graph.

Click the **CGM** and **Calibrations** sliders to toggle them on or off.

**Overlay Graph**

The Overlay graph has several components:

- A 24-hour timeline along the bottom x-axis.
- Scale for glucose readings on the left y-axis.
- CGM lines: Each line on the Overlay graph represents a different day’s data. A key above the graph shows which line corresponds with which day. Use these CGM lines to spot trends and compare data from different days in the selected date range.
- Hover: Put the cursor anywhere on a CGM line and rest it there for a moment to get detailed glucose information from that point in time.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis and values as set in Settings, on the right y-axis. The yellow line is the upper limit and the red line is the lower limit.
- Calibration events entered into the Dexcom CGM system shown by the gray circle C icon, when the calibration toggle is active.

**12 Daily Report**

The Daily report displays glucose data in graphs by the day over the selected time range. Daily graphs are displayed with the most recent day first. Use the numbers along the bottom of the last graph to load previous days.

To filter the Daily data, click **Days, Time of Day, Events, and Usage**, then click **Apply**. You must click **Apply** every time you change a filter to update the graph.
Click the CGM and Calibrations sliders to toggle them on or off.

**Daily Graph**
The Daily graphs include:

- A 24-hour timeline along the bottom x-axis.
- Scale for glucose readings on the left y-axis.
- CGM lines that trace CGM glucose data readings.
- Values associated with each CGM readings viewed by moving your mouse along the CGM lines.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis, as determined in Settings. The yellow line is the upper limit and the red line is the lower limit. Areas between the CGM line and a target range limit are color-coded accordingly.
- Health events as recorded on the Dexcom CGM system, shown with an icon below the x-axis and viewed by hovering your cursor over each icon.
- Calibration events entered into the Dexcom CGM system shown by the gray circle C icon, when the calibration toggle is active.

If the black trace line in the graph has interruptions or stops, then the Dexcom CGM system did not record glucose data during that time.

**13 Compare Report**
The Compare report is divided into two columns containing graphs, statistics, patterns and devices to compare within selected date ranges.

**Selecting Date Ranges**
Each column has its own date range selector. You can compare up to 90 days of data. Use the numbers located below the last graph to view more graphs in your selected date range.

The date bars display the current date ranges for comparison. To change the ranges for each column, choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.

Compare graphs through the Trends, Overlay, or Daily views and apply filters. To change the data views and filters:

1. Click **Trends, Overlay**, or **Daily** to select the view.
2. Click **Days, Time of Day, Events, and Usage**, then click **Apply**. You must click **Apply** every time you change a filter to update the graph.
3. Click the CGM and Calibrations sliders to toggle them on or off.
Compare Trends
In the Trends view, see side-by-side glucose trends throughout the day over the selected date ranges. These graphs include the same features as the Trends graph.

Compare Overlay
In the Overlay view, compare glucose data by the day over the selected time range. These graphs include the same features as the Overlay graph.

Compare Daily
In the Daily view, see side-by-side Daily 24-hour graphs for the selected date range. These graphs include the same features as the Daily graph.

Compare Statistics
All Compare views include key measurements, or statistics, which are shown below the graphs. These statistics are similar to those shown on the Overview report.

Statistics in the right column are marked with arrows to indicate changes from the left column values. An arrow pointed up means the statistic on the right is higher than the same statistic on the left. An arrow pointed down means it is lower.

Compare Patterns
Click the name of the pattern to view the time range, number of events and rebounds of the pattern.

Patterns that were resolved from the left column are marked on the right column with strikethrough green text and a checkmark icon.

New patterns in the right column are highlighted with a NEW icon. Best Days are always included for both selected date ranges.

Compare Devices
Click the device name at the bottom of the page to compare the Dexcom CGM model, serial number, and the upload date of the selected date ranges.

14 Statistics Report
Statistics for CGM data are shown either Daily or Hourly with standard and advanced views for the date range selected.

Daily statistics are calculated values for the individual day of the week over the date range selected. For example, if the date range is 14 days, all the CGM values collected on the two Mondays would be used in the Monday calculations.
Hourly statistics are calculated values for the individual hour of the day over the date range selected. For example, if the date range is 7 days, all CGM values collected for each individual hour for each of the seven days would be used in the calculations.

Click **Daily** or **Hourly** for standard views, then click the **Advanced** checkbox if you want to view all the statistics.

Daily and Hourly both have the same statistics and include:

- **Time in Range**: The percentage of time that glucose levels are in low, target, and high ranges. The following are recommended ranges from an international consensus. Dexcom CLARITY ranges may be different than Dexcom CGM alerts. Changes made here apply only to Dexcom CLARITY.
  - Target Range: 70-180 mg/dL
  - Very High: Above 250 mg/dL
  - Very Low: Below 54 mg/dL

- **# Readings**: Total number of CGM readings.
- **Min**: Minimum is the lowest CGM reading.
- **Mean**: The average of CGM readings.
- **Max**: Maximum is the highest CGM reading.
- **Quartile 25**: The CGM reading where 25% of all readings fell at or below this value, after ranking all values from lowest to highest.
- **Median**: The midpoint of all CGM readings where half the readings fall above.
- **Quartile 75**: The CGM reading where 75% of all readings fell at or below this value, after ranking all values from lowest to highest.
- **IQR**: Inter Quartile Range (IQR) is the difference between the Quartile 75 and Quartile 25 readings.
- **Std. Dev.**: Shows how much CGM glucose readings rise and fall. This is also known as glycemic variability.
- **SD Mean**: Standard Deviation of the Mean (SD Mean) estimates variability by dividing the SD by the square root of the number of values.
- **%CV**: The Coefficient of Variation (%CV) is calculated by dividing the glucose Standard Deviation by the mean glucose. %CV is a standardized measure that assesses the magnitude of glucose variability. The larger the %CV, the larger the variability in CGM readings.

15 **AGP Report**

The Ambulatory Glucose Profile (AGP) is a licensed, standardized glucose report created by the International Diabetes Center (IDC). AGP provides a standard set of...
information and graphs relating to your diabetes management and is only one part of understanding your glucose patterns.

The report is divided into these sections:

- **Glucose Statistics** summarize the glucose values from the selected date range.
  - **Glucose Exposure**: The average of all the glucose readings in the selected date range.
  - **Glucose Ranges**: Percentage of time spent in each of the glucose ranges.
  - **Glucose Variability**: How far readings are from the average.
  - **Data Sufficiency**: Percentage of time CGM readings were provided.

- **Ambulatory Glucose Profile** readings are combined to make a one day, 24-hour picture.
  - **50% Median**: Half of glucose values are above this line and half are below.
  - **25/75%-IQR**: Half of the glucose values are between these lines and half are outside these lines.
  - **10/90%**: 80% of glucose values are between these lines.

- **Daily Glucose Profiles** contain single day views of glucose values from the selected date range.

### 16 Support

For help using Dexcom CLARITY, click **Support** and choose an option:

- **Uploader Uninstall**: Removes the Dexcom CLARITY Uploader from your computer.
- **Help Center**: Access the interactive and searchable version of this user guide. Browse through related videos and handouts.
- **User Guide**: View, print, and save this guide in PDF format.
- **Safety Statement**: Review the Dexcom CLARITY Intended Use/Safety Statement.
- **Glossary**: See definitions of terms and explanations of data calculations.
- **Contact Us**: Get sales, technical, and Dexcom CARE contact information.

### Troubleshooting

If you are having trouble accessing Dexcom CLARITY, try these troubleshooting steps:

- If you forgot your password, go to the login screen and click **Forgot your password?** to have it emailed to you.
- If you forgot your username, go to the login screen and click **Forgot your username?** to have it emailed to you.
• If you're on a network or behind a firewall, contact your local IT support to ensure that your firewall settings allow you to access Dexcom CLARITY and privileges to install software.
• Make sure your computer is connected to the Internet throughout the session. If the computer loses that connection, it might not display the screens properly.
• Check that the computer’s operating system and browser are supported. See section 1 for more information.
• Know where downloaded files are stored. This will make finding downloads easier.
• Make sure that no other glucose data software is open, or they could cause stalls or failures during uploads from a CGM.
• Make sure you have appropriate permissions on your computer to download reports or install Dexcom CLARITY Uploader.
• Make sure the following URLs are included in any trusted website browser lists:
  o *dexcom.com
  o agent.mydiabetesdata.com

**Network Troubleshooting**
See Appendix A for important information about required network configurations.

**Technical Support**
For help with Dexcom CGM system, questions about Dexcom CLARITY, or to receive a printed version of the User Guide, contact [dexcom.com/contact](http://dexcom.com/contact)
17 Appendix A: Network Configuration Troubleshooting

This information is intended for users who are behind corporate firewalls or use Proxy Servers for internet connectivity. Please work with your local IT support to ensure proper network configuration.

Network Requirements
Running Dexcom CLARITY Uploader for clinics requires internet connectivity for outbound and inbound HTTPS/SSL traffic as listed below:

- dexcom.com (and all subdomains) on port 443
- agent.mydiabetesdata.com with DNS loopback/localhost support to 127.0.0.1

Trusted Websites
For networks using Trusted sites configurations, include the following entries in Internet Options > Security > Trusted sites > Sites or within managed Group Policy Configuration:

- https://*.dexcom.com
- https://agent.mydiabetesdata.com

Loopback Support
The site agent.mydiabetesdata.com must be treated as a local intranet site, bypassing Proxy Servers. This may require DNS loopback support to localhost 127.0.0.1, along with an exception within the corporate network configuration setup to allow agent.mydiabetesdata.com to bypass Proxy Server and be treated as a local intranet site. For clients where Group Policy enforcement is not in use or clients that allow for local Internet Options changes, the following steps can be used as a guide for proper configuration.

For Local Intranet:
1. Navigate to Internet Options > Security > Local intranet > Sites.
2. Uncheck Include all sites that bypass the proxy server.

For Proxy Settings Exceptions:
1. Navigate to Internet Options > Connections > LAN Settings.
2. Check the Use Proxy server for your LAN box.
3. Click Advanced.
4. Enter agent.mydiabetesdata.com in the Exceptions box.
5. Click OK.
