1 Introduction to Dexcom CLARITY

Intended Use/Safety Statement
The web-based Dexcom CLARITY software is intended for use by both home users and healthcare professionals to assist people with diabetes and their healthcare professionals in the review, analysis, and evaluation of historical CGM data to support effective diabetes management. It is intended for use as an accessory to Dexcom CGM devices with data interface capabilities.

⚠️ Caution: The software does not provide any medical advice and should not be used for that purpose. Home users must consult a healthcare professional before making any medical interpretation and therapy adjustments from the information in the software.

⚠️ Caution: Healthcare professionals should use information in the software in conjunction with other clinical information available to them.

⚠️ Caution: Federal (US) law restricts this device to sale by or on the order of a licensed healthcare professional.

About Dexcom CLARITY
Dexcom CLARITY is a software program that allows the transfer of glucose data from your Dexcom CGM system to Dexcom remote servers for data management to assist in your use of the Dexcom CGM and to assist in healthcare services. Dexcom CLARITY can transfer and manage data from the Dexcom G4 PLATINUM, Dexcom G5 Mobile CGM System, and Dexcom G6 (all of which are referred to as Dexcom CGM systems).

After the glucose data is uploaded to CLARITY, the information is processed by CLARITY and displayed on your computer in graphs to help you and your healthcare professional analyze trends and patterns in glucose. You can review, save, email and print the software reports in your home environment.

CLARITY displays glucose data from a Dexcom CGM system 3 hours after the data is captured. This means that the most recent data you view in CLARITY is at least 3 hours old.

Computer and Internet Configurations
An internet connection of 1.5 Mbps or more is required to install the software from the web, upload data or view the online User Guide.

It is recommended that you use an appropriate firewall program and an anti-virus program on your computer to protect against viruses, malware and unauthorized access.
to and use of your computer and the information stored, processed and transmitted by it.

CLARITY supports the following system configurations:

- **Windows 7, 8, or 10**
  - 1.3 GHz processor, 1 GB free RAM and 100 MB free disk space
  - Microsoft .NET Framework 4.6.1 or greater, full version
  - Display resolution of 1024 x 768 pixels or greater
  - Chrome, Firefox, or Internet Explorer 11 run in desktop mode or Microsoft Edge
  - USB 2.0+ port or better to connect the USB cable to upload data from the optional Dexcom receiver

- **Mac OSX 10.12, 10.13, or 10.14**
  - 2.3 GHz processor and 4 GB free RAM with 100 MB free disk space
  - Display resolution of 1280 x 800 pixels or greater
  - Safari 9.1, Chrome, or Firefox for Mac OSX
  - USB 2.0+ port or better to connect the USB cable to upload data from the optional Dexcom receiver

Optional computer configurations:

- A PDF reader for viewing, saving, and printing reports
- A printer for printing reports
- An Excel spreadsheet viewer for exported data

To run CLARITY, your network must allow the following outbound network traffic, which might require changes to proxy and network configuration:

- dexcom.com (and all subdomains) on port 443
- agent.mydiabetesdata.com with DNS loopback support to 127.0.0.1

To run the CLARITY Uploader, your network must allow the following outbound network traffic:

- *.dexcom.com (and all subdomains) on port 443

**Terms of Use**

Use by you of CLARITY and Dexcom services is subject to the Terms of Use at:

By using this guide, you agree to comply with the applicable terms and conditions in connection with your use of CLARITY, services and this User Guide.

**Privacy Policy and Privacy Practices**
To read Dexcom’s Privacy Policy, go to: [http://www.dexcom.com](http://www.dexcom.com)
Scroll to the bottom of the page, then click Privacy Policy.

**Proprietary Rights**
Dexcom CLARITY and this User Guide are ©2016-2020 by Dexcom, Inc. and its licensors. All Rights Reserved. CLARITY downloaded onto your computer or other devices might include certain third-party software licensed by Dexcom and the notices for which are set forth at: [http://www.dexcom.com/notices](http://www.dexcom.com/notices)

Third party products mentioned in this guide are subject to the rights of their manufacturers and distributors in the products and their trademarks.

**Contact Dexcom**
For help with a Dexcom CGM system, questions about CLARITY, or to receive a printed version of this manual, visit [dexcom.com/contact](http://dexcom.com/contact).

### 2 Access CLARITY
To access CLARITY on the web:

1. Go to [clarity.dexcom.com](http://clarity.dexcom.com)
2. Choose the Home Users option.
3. Enter the username and password for your Dexcom Mobile or any other Dexcom account.

Do not create a duplicate Dexcom account or your data will not be found. If you are unsure if you have an account, try to recover the login. You already have a Dexcom account if you:
   - Use the Dexcom CGM app
   - Upload your Dexcom receiver to CLARITY at home
   - Order supplies directly from Dexcom

Your CLARITY account is specific to your geographical area. Accounts created outside the United States will not be accessible within the United States.

### 3 Report Features
In CLARITY, you view glucose data reports with interactive graphs and relevant statistics.
Use the Settings page to customize data display and sharing, see section 14.

**Date Range Selection**
CLARITY presents data in a default date range of the most recent 14 days of data.

To change the date range, from any report:

1. Click in the date range box.
2. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.

**Data and Calibration Filters**
You can view or hide both CGM data and Calibration events from the graphs. By default, both events are on as indicated by a green slider. Off is indicated by a white slider.

To turn these events off so they do not appear on the graphs:

- Click the **CGM** slider to white.
- Click the **Calibrations** slider to white.

**Health Events**
Health events you enter into your Dexcom CGM system, appear on the graphs. Events show up on all graphs that include the date of the event. Each event is marked with an icon displayed below the x-axis and viewed by hovering your cursor over the icon.

If you enter multiple events within the same one-hour window, the icons display stacked on top of each other. Hover over one of the icons to view all the hourly information.

## 4 Print, Download, Email, and Export Reports
You can print, download, email and export reports with the links located at the top of CLARITY.

**Print Reports**
Printed reports include a section at the bottom for writing notes.

To print a report, from any report page:

1. Click the **print** icon at the top of the page.
2. Select a date range.
3. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.
4. Select at least one report to print.
5. Click **Print Report**.

**Download Reports**
To download a report as a PDF, from any report page:

1. Click the **download** icon at the top of the page.
2. Select a date range.
3. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.
4. Select at least one report to download.
5. Click **Save Report**.

**Email Reports**
You can only email the report to one email at a time. To email to multiple addresses, repeat the process after the first email has sent.

To send an email, from any report page:

1. Click the **email** icon at the top of the page.
2. Select a date range.
3. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.
4. Select at least one report to email.
5. Click **Continue**.
6. Enter the email address and an optional message.
7. Click the **Send a copy to myself** box if you would like a copy.
8. Click **Continue**.
9. Click **I Agree to the Terms** after you have read them.

**Export Reports**
You can export raw glucose data values, calibration values and events to an Excel spreadsheet, saved to your computer. This generates a .csv file.

To export a report, from any report page:

1. Click the **export** icon at the top of the page.
2. Select a date range.
3. Choose a most recent number of days or click the date boxes to choose dates for a custom view, then click **OK**.
4. Click **Export**, then **Close**.
5 Overview Report

The Overview report shows a glucose summary dashboard of statistics, pattern summaries and your best glucose day for the date range selected. It also provides information about the Dexcom CGM system used to upload the data shown.

Dashboard

The Overview report includes a summarized dashboard of key measurements from the selected date range including:

- **Glucose Management Indicator (GMI):** Approximates the laboratory A1C level expected based on average glucose measured using continuous glucose monitoring (CGM) values. Average glucose is derived from at least 12 days of CGM data. The GMI may be similar to, higher than, or lower than the laboratory A1C. Differences between GMI and laboratory A1C may reflect differences among an individual's red blood cell lifespan, how glucose binds to hemoglobin, or due to a recent fluctuation in glucose control.

- **Average glucose (CGM):** The average of all the glucose readings in the selected date range.

- **Standard deviation (CGM):** Standard Deviation (SD) reflects the amount of variability in CGM readings. The larger the SD, the larger the variability in CGM readings.

- **Hypoglycemia risk:** This calculation estimates risk for severe hypoglycemia. It is based on a combination of the number of times glucose was low, the magnitude of the low glucose and for how long there was low glucose.

  Experiencing frequent lower measured glucose values for short durations has more impact than minimal hypoglycemia for longer periods but with less frequency. Having more frequent lows for longer durations and at lower glucose levels carries a high risk for severe hypoglycemia. The hypoglycemia risk complements the patient's A1C measurements. Patients can have low or high A1C and still be at low, medium or high hypoglycemia risk. The impact of hypoglycemic risk on patients and diabetes management should be reviewed by a healthcare professional.

  The hypoglycemia risk estimation is calculated from a minimum number of days with a minimum duration of CGM wear time as follows:
- For reports with fewer than 20 days in the selected date range, hypoglycemia risk is calculated from a minimum of 12 days that maintain CGM wear time of 66% or more.
- For reports spanning more than 20 days in the selected date range, hypoglycemia risk is calculated from at least 60% of all the days in the selected date range that maintain CGM wear time of 66% or more.

**Clinical References**

**Time in range**: The percentage of time that glucose levels are in low, target and high ranges. CLARITY displays time in range from both daytime and nighttime ranges. Each Dexcom CGM reading is compared against the custom glucose target range and assigned a category of High, In Range, Low, or Urgent Low. Readings are tallied, then percentages for each category are calculated.

**Sensor usage**: Provides a high-level view of Dexcom CGM device usage.

- **Days with CGM data** shows the number of days during the reporting period with at least 50% CGM readings.
- **Avg. calibrations per day** displays the average number of calibrations per day, entered by the patient, during the reporting period. Only days with at least 50% CGM readings are included. The Dexcom G6 system is approved for use without calibrations or optionally with calibrations, making it possible to have zero average daily calibrations.

**Insulin**: This feature is only available for Dexcom compatible connected insulin devices. Connected insulin devices have Bluetooth capability and require pairing with their app. To see insulin data in Dexcom CLARITY, use the connected insulin device app to connect to Dexcom.

Dexcom CLARITY provides the following insulin statistics as manually entered into Dexcom apps, or as collected by a connected insulin device.

- **Insulin Ratio**: Compares fast-acting to long-acting doses in percentages. Long-acting doses may need to be configured in the connected device to display in Dexcom CLARITY.
- **Average Total Daily Units**: Average number of long- and fast-acting units per day within the selected date range.
- **Average Daily Fast-acting Doses**: Average number of fact-acting doses taken per day within the selected date range.

### Pattern Summaries and Best Day

The Overview report shows up to four patterns identified in the data. To view a summarized pattern on the Patterns report, click the box of the pattern for detailed graphs and statistics.

Limits for low and high glucose levels are changed on the Settings page, see section 14. Changes made in CLARITY apply throughout CLARITY, but don’t affect any settings on the CGM device.

Your best glucose day is the day you were most within your target range for the selected date range. Click the best glucose day box for a detailed view.

### Devices

Details about the Dexcom CGM system in use, include the Serial Number, last upload, and current alert settings.

### 6 Patterns Report

The Patterns report provides graphical patterns, statistics and considerations for highs, lows and your best day within the selected date range. These are the same patterns summarized on the Overview report. There will always be a Best Day tab to review. Click each tab to see details.

### Pattern Graphs

Each pattern is represented by a series of graphs, dated by each time the pattern was found in the selected date range, or a pattern occurrence.

Each graph includes:

- A 24-hour timeline on the bottom x-axis.
- Scale for glucose readings on the left y-axis.
- Target range limits on the right y-axis.
- CGM lines that connect the individual CGM glucose readings.
- Values associated with each CGM reading viewed by moving your mouse along the CGM lines.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis, as determined in Settings, see section 14. The yellow line is the upper limit and the red line is the lower limit.
- Significant daily data that is used to indicate the pattern, highlighted in the white background columns.
• Health events as recorded on the Dexcom CGM system shown with an icon below the x-axis and viewed by hovering your cursor over each icon.
• Calibration events entered into the Dexcom CGM system shown by the gray circle C icon, when the calibration toggle is active.

Pattern Occurrences
A pattern occurrence is a period of glucose data that matches a larger pattern of similar periods of glucose data. For example, if your data shows a pattern of nighttime lows, one of those nighttime lows would be an occurrence. Days may have multiple occurrences of a pattern.

Pattern occurrence are the white columns. Gray areas of the graph are not part of the pattern. Glucose values and events are viewed by moving your mouse over any part of the graph and hovering.

The Best Day pattern graph does not include gray shading.

A letter marks each pattern occurrence. This letter is displayed at the top of the graph, above the white column, and displayed at the left of the graph with the times of the occurrence.

Column and left side pattern occurrences will be highlighted when you hover your cursor over occurrences.

Rebounds
A rebound is when a pattern occurrence is followed immediately by the opposite – a high after a low, or a low after a high. The number of rebounds in the glucose data set is noted in the summary before the graphs.

Pattern Statistics
Statistics for the selected date range of patterns include average glucose measurement, standard deviation and the time in range.

Considerations
Based on the patterns of the selected date range, some possible considerations are provided at the bottom of the Patterns report. Consult a healthcare professional before making any medical interpretations and therapy adjustments from this information.

7 Trends Report
The Trends report allows you to see glucose trends at different times of day over the selected date range. For example, you might see that your glucose levels are stable during mornings but are less stable during afternoons.
To filter the Trends data, click **Days, Time of Day, Events, and Usage**, then click **Apply**. You must click **Apply** every time you change a filter to update the graph.

Click the **CGM** and **Calibrations** sliders to toggle them on or off.

**Trends Graph**
The Trends graph includes:
- A 24-hour timeline along the bottom x-axis.
- Scale for glucose readings on the right y-axis.
- CGM lines that trace CGM glucose data readings.
- Values associated with each CGM readings viewed by moving your mouse along the CGM lines.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis and values as set in Settings, see section 14, on the left y-axis. The yellow line is the upper limit and the red line is the lower limit.
- Calibration events entered into the Dexcom CGM system shown by the gray circle C icon, when the calibration toggle is active.

The yellow and red shaded bars show patterns of clinically significant hyper- or hypoglycemia, respectively. Three factors determine clinical significance:
- Time spent in hyper- or hypoglycemia
- Scale of hyper- or hypoglycemia
- Frequency of hyper- or hypoglycemia

The darkest shaded bars are the most significant areas of hyper- and hypoglycemia. Lighter shaded bars show other patterns of hyper- and hypoglycemia, including data not clinically significant.

**8 Overlay Report**
The Overlay report displays one week of data in each graph with colored lines to represent a single day’s data over time. For example, if you chose a date range of 10 days and do not apply any filters, you would see two graphs, one with seven lines and one with three.

To filter the Overlay data, click **Days, Time of Day, Events, and Usage**, then click **Apply**. You must click **Apply** every time you change a filter to update the graph.

Click the **CGM** and **Calibrations** sliders to toggle them on or off.

**Overlay Graph**
The Overlay graph has several components:

- A 24-hour timeline along the bottom x-axis.
- Scale for glucose readings on the left y-axis.
- CGM lines: Each line on the Overlay graph represents a different day’s data. A key above the graph shows which line corresponds with which day. Use these CGM lines to spot trends and compare data from different days in the selected date range.
- Hover: Put the cursor anywhere on a CGM line and rest it there for a moment to get detailed glucose information from that point in time.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis and values as set in Settings, see section 14, on the right y-axis. The yellow line is the upper limit and the red line is the lower limit.
- Calibration events entered into the Dexcom CGM system shown by the gray circle C icon, when the calibration toggle is active.

9 Daily Report

Daily displays glucose data in graphs by the day over the selected time range. Daily graphs are displayed with the most recent day first. Use the numbers along the bottom of the last graph to load previous days.

To filter the Daily data, click Days, Time of Day, Events, and Usage, then click Apply. You must click Apply every time you change a filter to update the graph.

Click the CGM and Calibrations sliders to toggle them on or off.

Daily Graph

The Daily graphs include:

- A 24-hour timeline along the bottom x-axis.
- Scale for glucose readings on the left y-axis.
- CGM lines that trace CGM glucose data readings.
- Values associated with each CGM readings viewed by moving your mouse along the CGM lines.
- Target glucose ranges shown by the colored lines that run parallel to the x-axis, as determined in Settings, see section 14. The yellow line is the upper limit and the red line is the lower limit.
- Health events as recorded on your Dexcom CGM system, shown with an icon below the x-axis and viewed by hovering your cursor over each icon.
• Calibration events for each blood glucose meter result recorded by your Dexcom CGM system, shown using the gray circle C icon when the calibration toggle is active.

If the black trace line in the graph has interruptions or stops, then your Dexcom CGM system did not record glucose data during that time.

10 Compare Report
The Compare report is divided into two columns containing graphs, statistics, patterns and devices to compare within selected date ranges.

Selecting Date Ranges
Each column has its own date range selector. You can compare up to 90 days of data. Use the numbers located below the last graph to view more graphs in your selected date range.

The date bars display the current date ranges for comparison. To change the ranges for each column, choose a most recent number of days or click the date boxes to choose dates for a custom view, then click OK.

Compare graphs through the Trends, Overlay, or Daily views and apply filters. To change the data views and filters:

1. Click Trends, Overlay, or Daily to select the view.
2. Click Days, Time of Day, Events, and Usage, then click Apply. You must click Apply every time you change a filter to update the graph.
3. Click the CGM and Calibrations sliders to toggle them on or off.

Compare Trends
In the Trends view, see side-by-side glucose trends throughout the day over the selected date ranges. These graphs include the same features as the Trends graph, see section 7.

Compare Overlay
In the Overlay view, compare day by day, a week of data over the selected date ranges. These graphs include the same features as the Overlay graph, see section 8.

Compare Daily
In the Daily view, see side-by-side Daily 24-hour graphs for the selected date range. These graphs include the same features as the Daily graph, see section 9.

Compare Statistics
All Compare views include statistics, which are shown below the graphs. These statistics are similar to those shown on the Overview report, see section 5.

Statistics in the right column are marked with arrows to indicate changes from the left column values. An arrow pointed up means the statistic on the right is higher than the same statistic on the left. An arrow pointed down means it is lower.

**Compare Patterns**
Click the name of the pattern to view the time range, number of events and rebounds of the pattern.

Patterns that were resolved from the left column are marked on the right column with strikethrough green text and a checkmark icon.

New patterns in the right column are highlighted with a NEW icon. Best Days are always included for both selected date ranges.

**Compare Devices**
Click the device name at the bottom of the page to compare the Dexcom CGM model, serial number, and the upload date of the selected date ranges.

**11 Statistics Report**
Statistics for CGM data are shown either Daily or Hourly with standard and advanced views for the date range selected.

Daily statistics are calculated values for the individual day of the week over the date range selected. For example, if the date range is 14 days, all the CGM values collected on the two Mondays would be used in the Monday calculations.

Hourly statistics are calculated values for the individual hour of the day over the date range selected. For example, if the date range is 7 days, all CGM values collected for each individual hour for each of the seven days would be used in the calculations.

Click **Daily** or **Hourly** for standard views, then click the **Advanced** checkbox if you want to view all the statistics.

Daily and Hourly both have the same statistics and include:

- **Time in Range:** The percentage of time that glucose levels are in low, target and high ranges. CLARITY displays time in range from both day and night ranges. Each Dexcom CGM reading is compared against the custom glucose target range and assigned a category of High, In Range, Low, or Urgent Low. Readings are tallied, then percentages for each category are calculated.
• **# Readings**: Total number of CGM readings.
• **Min**: Minimum is the lowest CGM reading.
• **Mean**: The average of CGM readings.
• **Max**: Maximum is the highest CGM reading.
• **Quartile 25**: The CGM reading where 25% of all readings fell at or below this value, after ranking all values from lowest to highest.
• **Median**: The midpoint of all CGM readings where half the readings fall above.
• **Quartile 75**: The CGM reading where 75% of all readings fell at or below this value, after ranking all values from lowest to highest.
• **IQR**: Inter Quartile Range (IQR) is the difference between the Quartile 75 and Quartile 25 readings.
• **Std. Dev.**: Standard Deviation (SD) reflects the amount of variability in CGM readings. The larger the SD, the larger the variability in CGM readings.
• **IQ Std. Dev.**: Inter Quartile Standard Deviation (IQSD) removes the top 25% and bottom 25% of CGM before calculating the SD.
• **SD Mean**: Standard Deviation of the Mean (SD Mean) estimates variability by dividing the SD by the square root of the number of values.
• **%CV**: The Coefficient of Variation (%CV) is calculated by dividing the glucose Standard Deviation by the mean glucose. %CV is a standardized measure that assesses the magnitude of glucose variability. The larger the %CV, the larger the variability in CGM readings.

### 12 AGP Report

The Ambulatory Glucose Profile (AGP) is a licensed, standardized glucose report created by the International Diabetes Center (IDC). AGP provides a standard set of information and graphs relating to your diabetes management and is only one part of understanding your glucose patterns.

The report is divided into these sections:

• **Glucose Statistics** summarize the glucose values from the selected date range.
  - **Glucose Exposure**: The average of all the glucose readings in the selected date range.
  - **Glucose Ranges**: Percentage of time spent in each of the glucose ranges.
  - **Glucose Variability**: How far readings are from the average.
  - **Data Sufficiency**: Percentage of time CGM readings were provided.
• **Ambulatory Glucose Profile** readings are combined to make a one day, 24-hour picture.
- **50% Median**: Half of glucose values are above this line and half are below.
- **25/75%-IQR**: Half of the glucose values are between these lines and half are outside these lines.
- **10/90%**: 80% of glucose values are between these lines.

- **Daily Glucose Profiles** contain single day views of glucose values from the selected date range.

### 13 Uploads

After signing in the first time, if you are using a Dexcom CGM receiver, you will see instructions to install the CLARITY Uploader software on your computer. You must have the Uploader to upload data from your CGM receiver to CLARITY. You only need to install this once.

If you use the Dexcom Mobile CGM, your data is already streaming to CLARITY so you do not need the Uploader.

### Data Collection

It is possible to use both a smartphone and a receiver to provide CGM data. The smartphone system streams data to the CLARITY server, where that data is made available for reports after three hours. The Dexcom receiver requires connection to a computer to upload the data periodically. If CGM users use a smartphone part of the time and a receiver part of the time, then CLARITY needs data from both to provide accurate statistics.

### Install the Dexcom CLARITY Uploader

From the top of the page, click **Upload** and follow the instructions. When prompted, enter the username and password you use for CLARITY.

By default, the **Keep me logged in** box is checked so that each time you connect your Dexcom receiver to your computer, the Uploader will automatically open a browser window to show your CGM data page. Uncheck the **Keep me logged in** box if you want to disable auto-login.

### Use the Uploader

To upload data from your Dexcom receiver:

1. Connect your Dexcom receiver to your computer using the USB cable supplied with your CGM.
2. Click the CLARITY logo in your system tray to get upload instructions, set preferences, and to view reports.
3. Select **Instructions** if you are using a Mac, or select **Options**, then **Instructions** if you are using a PC, for directions to upload your CGM data.

4. Select **Options** or **Preferences** tab to access the following:
   - **Auto-Display Reports**: Keep this box checked to allow Uploader to automatically open CLARITY after uploading data.
   - **Remembered Logins**: Click **Forget my login information** to reset the Uploader username autofill on the login screen. You can only access this feature if your Dexcom receiver is connected to the computer.

5. Select **View Report** to open CLARITY in a browser window. You may be asked to log in.

### 14 Settings

Use the Settings page to customize data display and sharing. Changes only apply to CLARITY and do not change any settings on your Dexcom CGM system. Your healthcare professional may use different settings to view your data.

**Patient’s Full Name**

Change how your name is displayed while viewing and for reports to your clinic. Use the name listed on your medical records.

**Glucose Time/Target Range**

To customize the upper and lower limits for the glucose target range click and hold a gray circle icon and drag it up or down to set the desired glucose levels for your target range. Or select the time and thresholds of your glucose level for both Day and Night, from the drop-down lists.

Throughout CLARITY, the upper limit line is always yellow, and the lower limit line is always red. The colors may appear different based on your monitor settings.

**Day and Night**

To customize the day and night, click and hold a gray circle icon and drag it left or right to set when the day begins and ends. Or, select a start and end time for both Day and Night, from the drop-down lists.

**Urgent Low Threshold**

Choose 50 or 54mg/dL as the threshold for Urgent Low displays within CLARITY reports. Changing this setting does not change the Dexcom CGM Urgent Low threshold which is set at 55mg/dL.

**Data Sharing with Clinics**
You must give permission to share your CLARITY data with your clinic’s CLARITY account, and for you to see data uploaded at a clinic on your CLARITY account.

You can share with more than one clinic. Clinics are displayed once you have accepted a sharing invitation from that clinic.

After you approve to share data with a clinic, any following data uploaded to CLARITY can be accessed by the healthcare professionals at that clinic.

Users or clinics can stop sharing data at any time.

- All data uploaded by receiver to the clinic’s CLARITY account will still be accessible at the clinic. This data will not be accessible from your CLARITY account after sharing is stopped.
- All data streamed from the Dexcom Mobile app or uploaded from the receiver to your CLARITY account will not be accessible to the clinic after sharing is stopped.
- You will continue to see your own data within your CLARITY account via receiver upload or streaming from your Dexcom Mobile app.

**Accept an Invitation to Share Data**

A healthcare professional uses their CLARITY account to invite you to share data with their clinic. They will provide the invitation in print or by email.

The invitation includes a sharing code that you enter on your CLARITY Settings page to accept the invitation before the expiration date shown. Once you have completed the acceptance, your account and the clinic’s account will automatically share data between them.

You can accept the invitation from an internet browser or from a smart device with the Dexcom CLARITY app. See Appendix A for more information about the Dexcom CLARITY app that is separate from CLARITY.

To accept the invitation from an internet browser, log into your CLARITY account:

1. Click **Settings**.
2. Click **Share Data with a New Clinic**.
3. Enter the sharing code and your date of birth.
4. Click **Continue**.
5. Click the **I consent to share my data with my clinic** box.
6. Click **Yes, Share My Data** on the verification page to confirm sharing.
7. Click **Close** on the confirmation page.
Clinics you share with are listed under Data Sharing with Clinics. You may share with more than one clinic.

Stop Sharing Data
To stop sharing data with a clinic, from the Settings page:

1. Click **Stop Sharing with this Clinic** for every clinic you want to stop sharing data.
2. Click **Stop Sharing with this Clinic** again on the verify page.
3. Click **Close** on the success page.

The clinic’s information will still appear on your Settings page for your reference.

15 Support
For help using CLARITY, click **Support** and choose an option:

- **Uploader Uninstall**: Removes the Uploader software from your computer.
- **User Guide**: View, print, and save this guide in PDF format.
- **Glossary**: Definitions of terms and understanding of data calculations.
- **Contact Us**: Get sales, technical, and Dexcom CARE contact information.

Troubleshooting
If you are having trouble accessing CLARITY, try these troubleshooting steps:

- Make sure your computer is connected to the Internet throughout the session. If the computer loses that connection, it might not display the screens properly.
- Check that the computer’s operating system and browser are supported. See section 1 for more information.
- Know where downloaded files are stored. This will make finding downloads easier.
- Make sure that no other glucose data software is open or they could cause stalls or failures during uploads from a CGM.
- Make sure you have appropriate permissions on your computer to download reports or install Uploader software.
- Make sure the following URLs are included in any trusted website browser lists:
  - *.dexcom.com (and all subdomains) on port 443

Technical Support
For help with Dexcom CGM system, questions about CLARITY, or to receive a printed version of this manual, visit [dexcom.com/contact](http://dexcom.com/contact).
16 Appendix A: Dexcom CLARITY app

The Dexcom CLARITY mobile app allows you to view glucose statistics, save and email reports, and enter the sharing code from your clinic to allow data sharing.

Download the Dexcom CLARITY app from the app store of your smartphone. The localization and languages selected on your smartphone and how you have your Dexcom account set up, controls how you view the CLARITY app. To view CLARITY compatible smartphones, visit: dexcom.com/compatibility

Dexcom CLARITY app features may not be immediately available and may not be available in all countries.

Summary
View glucose data for a selected date range.

- To select a date range, tap the green date bar at the top of the screen, then tap the most recent amount of days you want to view.
- Tap the statistics showing a greater than sign (>) to view detailed information.

Reports
Select a range and the reports you want to view, save, print, and email.

To view reports:

1. Tap Reports.
2. Tap 7 Days, 14 Days, 30 Days or 90 Days.
3. Tap the center report selection box.
4. Tap each report you want to include. Your selections are saved for your next visit.
5. Tap Done.
6. Tap View Reports.

To save, print or email reports:

- To save the report, tap the paper-arrow icon.
- To print the report, tap the printer icon.
- To email the report, tap the envelope icon.

Share
Accept invitations to share data with your clinic or generate a sharing code for limited access. See section 14 for more information on data sharing with clinics.

- Accept Invitation: To accept a sharing invitation from your clinic:
  1. Tap Share.
2. Tap **Accept Invitation**.
3. Enter the sharing code provided by your clinic.
4. Select your date of birth.
5. Tap **Continue**.
6. Tap the **I consent to share my data with my clinic** box.
7. Tap **Yes, Share My Data**.

- **Generate Code**: Use this option to share data with your clinic if they do not provide sharing invitations. To generate a share code:
  1. Tap **Share**.
  2. Tap **Generate Code**.
  3. Tap **3 Months**, **6 Months** or **1 Year** to select how long the code is valid.
  4. Tap **Generate Code**.

**Profile**
Customize your app preferences from the options found on this page.

- **Manage Profile**: Update your Dexcom account information.
- **Glucose Ranges**: Customize the glucose ranges for viewing in CLARITY. Changes to these ranges do not affect the ranges, alarm, or alerts for Dexcom CGM devices.
- **Notifications**: Modify push notifications, goal settings, and the email summary. Notifications push to your smartphone when data is available and connected to the internet. Email Summary is sent weekly to the email address you have on file with Dexcom.
- **Walgreens**: In the CLARITY app, you can refill Walgreens prescriptions, locate stores, and earn Balance® Rewards points. To earn points, you must be signed into your Walgreens.com account, enrolled in the Balance Rewards for healthy choices® and regularly complete the lifestyle challenge of checking your blood glucose.
- **Support**: Learn about features or contact tech support.
- **About**: Get information about this app.
- **Logout**: Tap **Logout** at the bottom of Profile page to log out of the app.
